

DOCUMENT SECURITY SUITES PROVIDE HIGHLY SECURE ONLINE FILE TRANSFER, IMPROVE PROFITABILITY

Web-Based File Security Platform from Janet Penn Consulting Manages Document Security without Additional Hardware, Software or Expensive Training

LITTLE FALLS, N.J., October 19, 2009 – Janet O. Penn, president of Janet Penn Consulting, has announced the launch of her company's new Online file sharing solution, Document Security Suites www.documentsecuritysuites.com. The totally web-based interface allows corporations, government agencies and businesses to transfer sensitive, confidential files via the Internet securely and quickly. It does not require any additional hardware or software, works from any employee's computer on any system, and can be used with minimal training.

This new virtual data transfer solution is cost-effective in that it requires no equipment or additional staff to manage it. The innovative combination of Online secure data transfer, encryption and data storage confers the highest level of Online security available as well as help companies meet Health Insurance Portability and Accountability (HIPAA) electronic transmission standards.

"Our platform adheres to the highest degree of security standards," stated Letitia Andrews, Director of Business Development for DSS. "We have carefully designed our encryption to enforce industry-standard ciphers such as RC2 or DES." Andrews, based in the company's Dallas office, pointed out that DSS is in compliance with HIPAA standards regarding how digital records should be kept and shared, and can help a medical institution or practice meet key HIPAA requirements when used properly.

DSS can send any size file, except for program executable file types. It encrypts all documents and files as they are uploaded to their secure Online suite "to confer greater protections against unwanted intruders," Penn explained. "In addition, each DSS suite of rooms has its own user access, file usage and space allocation set up by the business' system administrator, so that Online transfers are closely monitored and guarded," she added.

Penn noted that managing the security of data affects company operations and reduces profits when data security is compromised. For example, in spite of increased email encryption and digital signatures, compromises still occur from intruders on email systems, which can result in staggering revenue losses.

"Any business that shares data knows that the need to transmit documents securely to business partners or among staff has increased," said Penn, an Internet marketing consultant. "This increased activity requires a secure vehicle that guarantees the data's

delivery to the intended recipient. This is exactly what Document Security Suites does.” DSS customers include law offices, accounting firms, major corporations and government agencies. DSS supports all files types except executables, and functions on any web browser or operating system, providing enhanced flexibility as well as security.
